

Hands-on experience

LOOKING FOR A LAMINATED PANEL TO BUILD PREMIUM VEHICLES, DAVID GRAY CAME ACROSS **LINER TRANSPORT EQUIPMENT**. BASED IN CAMPBELLTOWN, NSW, THE COMPANY HAS ESTABLISHED A GLOBAL NETWORK OF INDUSTRY EXPERTISE – AND DELIVERED A FIBREGLASS LAMINATE DESIGNED TO OUTPERFORM ITS COMPETITION.

“Liner Transport Equipment’s top priority is to supply the best fibreglass laminate available,” says Luke Davies, who can draw on eight years of experience in the manufacturing of fibreglass sandwich panels for the transport and recreational vehicle industries. It is no surprise that David Gray, managing director of Graystar Trailers, consulted Liner Transport Equipment when he noticed that the quality of the fibreglass laminate he was using - supplied by another company - was not consistently up to the required standard.

“ Luke Davies has gone beyond the call of duty to assist us with sourcing a product that is top class and at the right price. ”

“As Graystar Trailers is only interested in using premium products, I had to react immediately,” David recalls. “If you use large flat panels of white gloss fibreglass, every blemish and imperfection will stand out at first glance – so we had to find a solution.” Relying on a global supply network, Liner Transport Equipment was able to provide an immaculate substitute in an instant. Founded in 2008, Liner Transport Equipment has established international business

relationships allowing it to stay in close touch with technological progress around the world. Based on hands-on experience with fibreglass sandwich panels for refrigerated and dry freight vans, Luke Davies recommended Brianza Plastica’s Elycold fibreglass sheet. “I have used fibreglass laminate from all major suppliers in Europe and the United States,” says Luke. “And I have found the quality and consistency of Brianza Plastica’s laminate to be far superior to any of the other manufacturers.”

The Elycold laminates are manufactured in a discontinuous process allowing a natural curing of the composite. “By avoiding the thermal shock typical of a continuous process, Elycold laminates guarantee perfect planarity - a vital feature of premium quality panels,” Luke explains. “A thick layer of UV-resistant gel coat resin is employed to ensure perfect covering of the underlying fibres and excellent weather resistance.” Founded in 1962, Italian company Brianza

Plastica employs 250 people producing flat fibreglass laminates used by European customers such as Gray & Adams, Grupo Peragon, Van Hool, Rolfo Plastic Gall, Isokit, and Cold Car. In 2009, Liner Transport Equipment was appointed as the official distributor for the Brianza Plastica product range in Australia and New Zealand, supplying the local transport and recreational vehicle industries with fibreglass sheet and coils. Using Elycold laminate delivered by Liner Transport Equipment, Graystar Trailers will soon expand its laminated panel production activities. “We look forward to an ongoing relationship with Luke Davies,” says David Gray. Convinced by Brianza’s Elycold laminate, he has no doubt that Liner Transport Equipment will keep delivering the best product available. “Luke has gone beyond the call of duty to assist us with sourcing a product that is top class and at the right price. His service has been impeccable,” he says. “And I am sure he will maintain this course.”
